

Feel the Surface! Hymmen-Technologies to Catch Hold Of

Come and learn more about methods and processes that are proven and innovative at the LIGNA 2017. Visitors can see multiple fields of application opened up by Hymmen technologies.

The Hymmen experts are looking forward to presenting all the facts about the innovative technologies, trends and developments to the numerous industry experts from home and abroad. Whether it's the newly developed high-gloss technology in the double belt press sector, the calander coating inert (CCI) or industrial digital printing – Hymmen technologies have cornered the market for surface finishing. One of the key innovations is the independent digital printing system for up to 3-mm-thick edge banding material. In addition, the Digital Lacquer Embossing is Hymmen's response to a clear customer need for the look and feel of a surface to match.

Hymmen "JUPITER JPT-WS" for digital printing on edge banding material.

Visitors can see and feel for themselves the wide range of potential applications for end products made from Hymmen equipment. They are put to the practical test in the flooring, wall covering or table/furniture surfaces assembled at the Hymmen fair stand.
